[DATE]

**SavantX launches SCAN: A search tool for online video content that enables students, teachers and anyone working remotely to search and analyze video content in a fraction of the time it takes to watch them**

**Jackson, WY** -- SavantX has launched SCAN, a new digital tool for students, teachers and anyone working remotely to quickly search and analyze video content. Using SCAN, users can easily explore online video content such as lectures, presentations and meetings in a fraction of the time it takes to watch them.

SCAN is built on SavantX's patented HyperNAV interface that enables users to interact with a 3D map of keywords for each video and click thru to the exact clip where the keyword is mentioned.

SCAN's instant overview of video content enables users to explore and analyze content much faster than any previous method, while also highlighting non-obvious connections between keywords.

"SCAN heralds a new breed of video exploration tools optimized for students, teachers and those working remotely," said SavantX CEO Ed Heinbockel. "After COVID-19, we've all become inundated with video content and up until now, there hasn't been an effective tool for helping people quickly explore and discover key concepts within them. SCAN solves this problem by analyzing video content in a fraction of the time it takes to watch them, and gives users a visual map of keywords that's one click away from viewing the content where the keyword is mentioned."

SCAN is available now at <https://savantx.com/scan> and is free to use.

About SavantX: [SavantX](#) is a Jackson, Wyoming based technology company with a mission to transform complex problems using artificial intelligence, machine learning and quantum computing. The company was co-founded by CEO Ed Heinbockel, named one of the "Top 100 Thinkers of Our Time" by Newsweek Magazine.
